

Business Requirements Document (BRD)

Project Name: Zuri Sales & Dashboard Enhancements

Document Owner: [Your Name / Project Manager]

Date: 09-Oct-2025

Version: 1.0

1. Purpose

This document defines the business requirements for the Zuri platform enhancements as captured in the Jira user stories ZB-1 to ZB-5. It focuses strictly on features and functionalities listed in these user stories.

2. Scope

In-Scope: - Features and functionalities mentioned in the Jira user stories (ZB-1 to ZB-5).

Out-of-Scope: - Features not explicitly mentioned in the Jira user stories.

3. Stakeholders

Role	Responsibility
Product Owner	Prioritize features, approve requirements
Project Manager	Oversee implementation, deployment, and timelines
Development Team	Implement backend, frontend, and AI features as per user stories
QA Team	Perform testing and validation as per user stories
End Users	Provide feedback on implemented features

4. Functional Requirements

4.1 Authentication

- **ZB-1:** Google OAuth 2.0 authentication to securely access personalized dashboards.

4.2 Dashboard & AI Features

- **ZB-2:** Personalized dashboard for logged-in users with AI chat and key widgets for insights and recent activity.

4.3 Contact Management

- **ZB-3:** CRUD operations for contacts, including bulk import and filters for efficient access.

4.4 Deal Management

- **ZB-4:** Kanban view for deals to track progress from Lead → Won/Lost and forecast revenue.

4.5 Reporting

- **ZB-5:** Generate and export summary reports including Deal Forecast, Activity Log, and Adoption metrics.
-

5. Non-Functional Requirements

- **Performance:** All features should load and respond efficiently.
 - **Security:** User authentication and data access must comply with security best practices.
 - **Reliability:** Features must operate as expected under standard usage.
 - **Maintainability:** The system should support updates and modifications strictly for the listed user stories.
-

6. Assumptions

- All user stories are feasible within the existing Zuri platform.
 - Stakeholders will provide timely clarification and approval for features.
-

7. Dependencies

- Google OAuth 2.0 service for authentication.
 - Existing Zuri backend and frontend services.
-

8. Acceptance Criteria

- All user stories ZB-1 to ZB-5 are implemented exactly as described in Jira.
- Features must pass QA validation for functionality and usability.
- Dashboards, Kanban views, contact management, and reporting must function as per the user stories.
